

Corporate In-house Startup Programs: A Management Assessment

Assignment rubric · 3 learning objectives × 3 levels · 1,200–1,500 words · ≥ 5 sources (APA 7) · AI drafts the grade with quoted evidence, the instructor decides

100
points total

LO1 · CLO1 Positioning 30 WEIGHT	LO2 · CLO2 Multi-perspective analysis 40 WEIGHT	LO3 · CLO3 Recommendations & academic writing 30 WEIGHT
Positions the program accurately within technology strategy and the technology acquisition approaches.	Analyses merits and demerits from the perspective of corporate management, on the basis of evidence.	Derives feasible recommendations from the analysis and presents them in an appropriate academic form.
3 Excellent - Defines the program and distinguishes its types (call-for-proposals, CVC-linked, spin-off) - States its purpose within technology strategy - Explains, with literature, how it differs from and complements in-house R&D, alliances, industry–government–academia and external venture collaboration	3 Excellent Both merits and demerits, from ≥ 3 perspectives (resource allocation, R&D organisation, people & careers, IP & governance, finance, portfolio) - Every argument backed by literature or a concrete case Trade-offs addressed (e.g., autonomy vs control)	3 Excellent - Recommendations follow logically from LO2; target company's conditions specified - Concrete measures: evaluation criteria, resource rules, interface with parent, exit criteria - Clear structure · ≥ 5 sources in correct APA · word count met
2 Satisfactory - Definition and strategic purpose are stated - Comparison with other acquisition approaches is partial, or program types are unclear	2 Satisfactory - Both sides covered, but ≤ 2 perspectives or some arguments unsupported - Trade-offs only weakly mentioned	2 Satisfactory - Recommendations only partly tied to the analysis, or generic measures - Minor deficiencies in structure or citation
1 Developing - General description only - Link to technology strategy and acquisition approaches is missing or incorrect	1 Developing One-sided (merits or demerits only) - No evidence; a list of general statements or opinions	1 Developing - No recommendations, or unrelated to the analysis - Unclear structure; citations missing; word count far off

Scoring

$$\text{total} = \sum (\text{weight} \times \text{level} \div 3)$$

Example: LO1 = 3, LO2 = 2, LO3 = 3 → 30 + 26.7 + 30 = **86.7**

Level rule

A level is awarded only when **all** its conditions are met. If any condition of a higher level is missing, award the level below.
LO3 formal requirements are checked independently of content.

Evidence rule

Every level descriptor can be verified by a **quoted passage** from the submission. The AI drafts the grade with evidence; the instructor examines it and releases the final grade.
